

## Drone Programming Class (8 sessions)

At Drone Programming School, you will have fun learning the basics of programming. From 2023 to 2024, there will be a series of drone programming competitions, starting with the Kobe and Osaka competitions, followed by national and then international championships. Seize this great opportunity and we highly recommend participating in these competitions!

There are Kansai regional and national competitions for drone piloting and programming. The Kansai competition will be held in the winter of 2024, and the national competition is scheduled for the spring of 2025. Our Marist After School team is eligible to participate, so we highly encourage taking advantage of this opportunity to learn at our after-school program and compete in the tournament. For more information, please visit the official website of the national competition:
